**Re: Claridge Moon Development at 340 Queen Street
Blasting Operations Vibration Monitoring Report
151 Bay Street Monitoring Locations**

Dear Mr. Tuttle,

Attached please find the data detailing the results of the Vibration Control Program developed and implemented on site as part of the blasting operations undertaken for the Claridge Moon Development at 340 Queen Street. This vibration monitoring program was initiated on July 22, 2019 and remains installed to monitor the remaining elements of excavation on the project. The program was implemented to record vibrations present at the structures adjacent to the blasting operations in order to guard against possible adverse impacts on the surrounding structures. As requested, this report specifically details the results as measured at the various 151 Bay Street monitoring locations.

Historically, blasting operations attract a great deal of attention from occupants of buildings immediately adjacent to the project. Blasting tends to be highly visible, often noisy and can be a disruptive imposition on the day-to-day activities of the local community. Inhabitants of buildings close to the blasting often feel vibrations from the operation and as a result, become much more conscious of many of the previously unnoticed cracks, water stains, and similar defects in their homes and offices. Though there is an intuitive belief by most owners that if they can feel the blast vibrations they must be damaging, these vibrations typically induce far lower strains on building components than the day-to-day environmental stresses that maintain every structure in a dynamic state. The combination of low particle velocities and frequencies beyond the natural frequencies of most residential structures generated by blasting and construction equipment are typically not damaging.

A full time on-site Vibration Monitoring Program was implemented to delineate vibration intensities experienced at a variety of structures in the vicinity of the work. As requested, this report specifically details the results measured at the 151 Bay Street monitoring locations. Accordingly, the monitoring sensors listed below were installed at the following locations inside 151 Bay Street for all excavation operations undertaken on the site:

- 151 Bay Street – Location 1
 - Geophone bolted vertically to foundation wall inside Level 1 of the Parking Garage in the Northern section of the building (refer to monitoring map).
- 151 Bay Street – Location 2
 - Geophone bolted vertically to foundation wall inside Level 1 of the Parking Garage near the Eastern corner of the building (refer to monitoring map).
- 151 Bay Street – Mechanical Room (Location 3)
 - Geophone bolted horizontally to concrete floor in the Pool Mechanical Room inside Level 1 of the Parking Garage (refer to monitoring map).
- 151 Bay Street – Location 4
 - Geophone bolted vertically to foundation wall inside Level 1 of the Parking Garage in the Southern section of the building (refer to monitoring map).
- 151 Bay Street – Location 5
 - Geophone bolted vertically to foundation wall inside Level 1 of the Parking Garage near the Southeast corner of the building (refer to monitoring map).

In response to concerns over vibration levels experienced on the upper floors of 151 Bay Street, Explotech administered additional monitoring inside the structure between February 6, 2020 and March 3, 2020. This supplementary monitoring program was designed to measure a representative sample of blast vibrations as experienced on upper floors as well as confirm the assumed vibration attenuation characteristics of the structure. More details on this program can be found in the *“151 Bay Street - Attenuation of Ground Vibrations Travelling up the High-Rise Structure”* memorandum dated March 4, 2020. The two additional monitors were located as follows:

- 151 Bay Street – 5th Floor
 - Geophone sandbagged on concrete floor in the mechanical/storage room immediately to the South of the elevator shaft on the 5th Floor (refer to monitoring map).
- 151 Bay Street – 9th Floor
 - Geophone sandbagged on concrete floor in the mechanical/storage room immediately to the South of the elevator shaft on the 9th Floor (refer to monitoring map).

The monitoring instruments installed consisted of Instantel tri-directional digital seismographs capable of measuring ground vibration intensities up to 254mm/s at a frequency response of either 2 – 250Hz or 1 – 315Hz depending on the installation. The units were programmed to measure all vibration levels continuously at a sampling rate of 1024 samples per second at five minute intervals. Following each five minute interval, the units reviewed 307,200 measured vibrations, and permanently recorded the peak particle velocity for that time interval while deleting all subordinate vibration intensities. This process was repeated for all subsequent five minute time intervals thereby providing maximum vibration intensities experienced at the monitoring location throughout the day. Such a configuration permits continuous monitoring of vibration levels and provides complete coverage of all vibrations, construction induced or otherwise, experienced at the monitored structure. Events recorded under this program mode are marked by an “H” on the vibrations summary report.

As an additional analytical tool, the seismographs were configured to record a more detailed waveform in the event that vibration intensities exceeded a pre-set trigger level programmed at either 5mm/s and 10mm/s depending on the monitoring location. This feature permits advanced analysis in the event that anomalous elevated readings are recorded. Events recorded under this program mode are marked by an “W” on the vibrations summary report.

EXPLOTECH

Particle velocity is the descriptor of choice when dealing with vibrations because of its superior correlation with the appearance of cosmetic cracking. While particle velocities provide one measurement statistic, structural response to varied frequency necessitates the inclusion of frequency analysis in all vibration measurement. As such, the United States Bureau of Mines developed a set of criteria utilizing a graded scale incorporating reduced permissible particle velocities at reduced dominant frequencies (Refer to Figure 1 below). This set of criteria is now almost universally accepted as the basis for controlling blast and construction induced vibrations. This is not to say that damage automatically occurs once these levels are breached and, in fact, threshold damage would not occur in the average residence until ground vibrations reached significantly higher intensities than those listed. Damage as a result of transient vibrations at particle intensities below the above noted USBM threshold limits has never been scientifically observed.

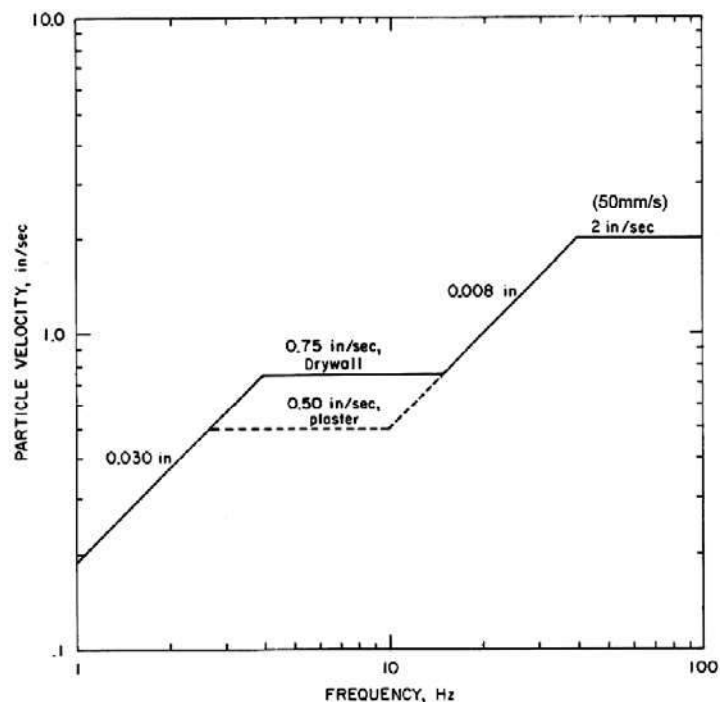

Figure 1 – USBM Z-Curve

A review of the data collected inside the 151 Bay Street structure over the course of the project confirms that the maximum readings generated at each monitored location associated with the blasting or construction operations were as follows:

Maximum Vibrations at 151 Bay Street Monitoring Locations				
Seismograph Location	Date	Time	Velocity (mm/s)	Dominant Frequency (Hz)
Permanent Installations				
151 Bay – Location 1	April 2, 2020	14:26	44.48	108.5
151 Bay – Location 2	November 25, 2019	13:33	80.22	203.9
151 Bay – Mechanical Room (Location 3)	November 28, 2019	10:37	58.04	153.3
151 Bay – Location 4	February 25, 2020	8:14	37.96	69.13
151 Bay – Location 5	November 26, 2019	13:38	45.54	92.25
Short-Term Installations February 6, 2020 to March 3, 2020				
151 Bay – 5 th Floor	February 18, 2020	14:56	13.97	43.88
151 Bay – 9 th Floor	February 18, 2020	14:56	10.54	40.63

The following fourteen (14) instances of blast induced vibrations exceeded 50mm/s during the course of the monitoring program:

<i>Vibration Levels Exceeding 50mm/s at all 151 Bay Street Monitoring Locations</i>				
<i>Seismograph Location</i>	<i>Date</i>	<i>Time</i>	<i>Velocity (mm/s)</i>	<i>Dominant Frequency (Hz)</i>
151 Bay – Location 2	November 22, 2019	9:30	62.88	229.5
151 Bay – Location 2	November 22, 2019	11:01	58.03	196.0
151 Bay – Location 2	November 25, 2019	13:33	80.22	203.9
151 Bay – Mechanical Room (Location 3)	November 28, 2019	10:37	58.04	153.3
151 Bay – Location 2	December 19, 2019	13:32	51.11	222.6
151 Bay – Location 2	January 28, 2020	10:05	60.58	68.0
151 Bay – Location 2	January 28, 2020	13:02	69.48	67.0
151 Bay – Location 2	January 29, 2020	8:02	56.12	76.88
151 Bay – Location 2	February 18, 2020	14:56	53.22	80.0
151 Bay – Location 2	March 24, 2020	10:39	55.65	244.5
151 Bay – Location 2	March 25, 2020	9:49	52.89	73.13
151 Bay – Location 2	April 1, 2020	10:37	59.65	165.0
151 Bay – Location 2	April 2, 2020	14:26	52.45	64.25
151 Bay – Location 2	April 7, 2020	13:32	55.56	73.25

While the maximum vibration levels above clearly represent multiple exceedances of the USBM thresholds, given the transient nature of the vibration waveforms and conservatism inherent to the standards, the risk of damage associated with these events remain extremely low at these locations. Furthermore, as detailed in the *“151 Bay Street - Attenuation of Ground Vibrations Travelling up the High-Rise Structure”* memorandum dated March 4, 2020, vibrations generated from the blasting operations were confirmed to be attenuating in a predictable manner as they propagate up the rigid high-rise structure. Based on those findings, the mean reduction in vibration amplitude between the P1 Level and 5th floor was approximately 56% while the mean reduction in vibration amplitude in going from the P1 level to the 9th floor was approximately 68%. That said, vibrations induced by the blasting operations would be clearly perceptible to occupants of the adjacent buildings and could cause minor shifting in some items, knick knacks and wall hangings.

It should also be noted that the attached data set contains numerous elevated anomalous readings that have been disregarded from the data set. The anomalous readings were as follows:

<i>Anomalous Vibration Levels</i>				
<i>Seismograph Location</i>	<i>Date</i>	<i>Time</i>	<i>Velocity (mm/s)</i>	<i>Anomalous Source</i>
151 Bay – 5 th Floor	February 29, 2020	23:00	14.86	Power Spike / RF Interference
151 Bay – 5 th Floor	March 4, 2020	6:45	19.05	Power Spike / RF Interference
151 Bay – 5 th Floor	March 15, 2020	12:28	15.75	Power Spike / RF Interference

EXPLOTECH

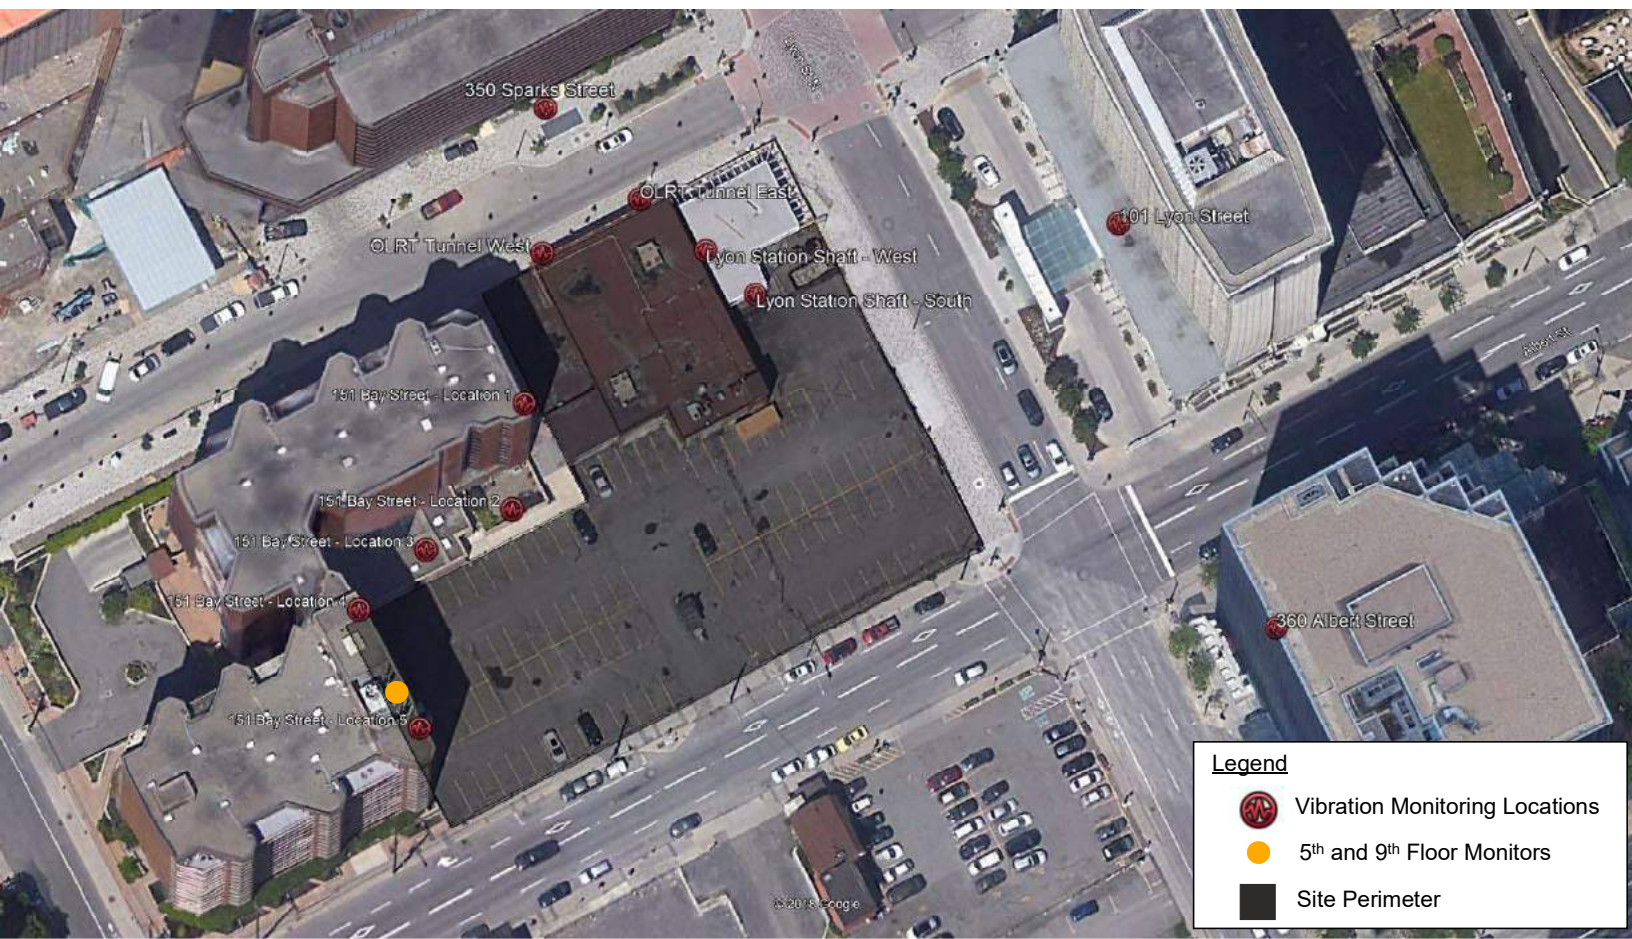

Effective April 30, 2020 the monitoring program remains active inside the 151 Bay Street structure and are scheduled to remain so for the outstanding elements of excavation on the project. Should you have any questions or concerns related to the information contained herein or the monitoring program undertaken, please do not hesitate to contact the undersigned at your leisure.

Kindest regards,

Mitch Malcomson, P. Eng.
